

OPPORTUNITIES FROM CHINA'S ACCESSION TO THE WTO

Indiana

The U.S.-China Bilateral Agreement on China's accession to the WTO opens an important market to Indiana's exports, benefitting key industries and creating export and employment opportunities. The importance of exports to China and the benefits of the Agreement for Indiana and its key industries are outlined below.

Export Profile

Indiana's exports to China in 1998 totaled \$90 million almost triple the 1993 total of \$32 million. In 1998, China was Indiana's 16th largest export market, up seven places from 23rd position in 1993.

Indiana's exports to China are becoming more diversified with 1998 exports encompassing 24 product groups, up from 18 product groups in 1993. Also, several Indiana export categories registered over 1,000 percent growth in sales to China from 1993 to 1998.

Included in Indiana's exports to China in 1998 were those from several metro areas located wholly or partially in Indiana: Indianapolis (\$22 million), Cincinnati, OH-KY-IN (\$53 million), and Louisville, KY-IN (\$14 million).

Indiana metro areas that recorded triple-digit percentage gains in exports to China from 1993 to 1998 included Gary (697 percent), Indianapolis (599 percent), Louisville, KY-IN (491 percent), and Fort Wayne (198 percent).

- Tariff elimination for furniture. Major reductions in tariffs for engines and parts, special purpose vehicles, motor vehicles, auto parts, dishwashers and dryers, specialized machinery, metalworking machinery, building materials, pumps and compressors, medical equipment, civil aircraft, wood products, agricultural and construction equipment, food processing machinery, and scientific and measuring instruments.
- Low tariffs for most chemicals at WTO harmonization rates, including pharmaceuticals and plastics.
- Elimination of import restrictions for products such as civil aircraft, special purpose vehicles, and construction and medical equipment.

The agreement will open the market for a wide range of services, including telecommunications, banking, insurance, financial, professional, hotel, restaurant, tourism, motion pictures, video distribution, software entertainment distribution, periodicals distribution, business, computer, environmental, and distribution and related services.

Sector Snapshot

U.S. farmers no longer will have to compete with export subsidies on China's agricultural products. Also, China has agreed to eliminate sanitary and phytosanitary barriers that are not based on sound scientific evidence, such as the restrictions on meat and poultry. In addition, exporters will benefit from broadening the right to import and distribute imported products in China and from tariff cuts on a wide range of products including pork and dairy products. China also will end its import monopoly for bulk commodities and establish large low-duty tariff-rate quotas for corn and soybean oil. Soybean oil will be totally removed from state trading in six years.

As a result of the Agreement, Indiana's key export sectors benefit from reduced tariffs in China, strong intellectual property protection and improved trade rules protecting U.S. industries against unfair trade practices and removing burdensome obstacles, including:

Key Industry Benefits

Feed Grains and Products

China's grain policies are becoming more market-oriented and its WTO accession commitments will speed up this process, opening up real long-term opportunities for foreign grain suppliers. China committed to a nominal 1 percent tariff on all grains imported within a tariff-rate quota (TRQ). The TRQ on corn will be initially set at 4.5 million metric tons and grow to 7.2 million metric tons by 2004. Private traders will be permitted to handle 25 percent of imports under the TRQ, growing to 40 percent. In calendar year 1999, China imported 70,000 metric tons of corn from all countries. China's commitment to end export subsidies will reduce its price competitiveness for corn in other markets.

Dairy Products

China's dairy product consumption is rapidly increasing due to rising incomes and government promotion. China's milk production is also growing, but the domestic dairy sector is not expected to keep up with the growth in demand. Under its WTO accession agreement, China will cut its tariffs on selected dairy products by 2004. Specific reductions include: selected cheeses (from 50 percent to 12 percent); lactose (from 35 percent to 10 percent); and ice cream (from 45 percent to 19 percent). In recent years, the United States has supplied approximately one-fifth of China's dairy imports.

Pork

China consumes far more pork than any other country, but its trade barriers have effectively closed its market to imports. Under its WTO accession agreement, China will cut its tariff on frozen pork cuts and offal from 20 percent to 12 percent by 2004. There will be no quantity limits at these tariff levels. As a result of the 1999 U.S.-China Agreement on Agricultural Cooperation, China agreed to accept all pork from the United States that is certified wholesome by USDA.

Soybeans and Products

China is the world's largest growth market for soybeans and products, and has taken important steps under its WTO accession agreement to open its market to these products. Tariffs will be bound at a low of 3 percent on soybeans and 5 percent on soybean meal with no quota limits. For soybean oil, the tariff will drop to 9 percent, and the tariff-rate quota and state trading will be eliminated by 2006.

Chemicals

This sector includes chemicals and chemical products such as cosmetics, pharmaceuticals, agricultural chemicals, resins, and plastics. China will reduce average tariffs on chemicals by more than half to an average rate of 6.9 percent by January 1, 2005. All priority U.S. chemical exports, as well as all products in the Chemical Tariff Harmonization Agreement of the Uruguay Round (CTHA) are included in the tariff reductions. In addition, China will eliminate all quotas on chemical products by 2002. Trading rights will be phased in over three years from accession for most chemical products. China will not apply or enforce export performance or local content requirements as a condition for importation or investment approval. China has agreed to apply tariffs uniformly and all taxes equally to domestic and foreign chemical product businesses. This will alleviate the uncertainty associated with China's inconsistent application, refund, and waivers of its 17 percent value added tax.

Engines

China will reduce its tariffs on engines to an average of 7.9 percent from the current average of 12.4 percent. Reductions will begin upon accession and will be fully implemented by January 1, 2004. Trading and distribution rights for engines will be phased in over three years. Quotas and licenses on engines will be phased out by 2003 with an initial quota level including motor vehicles, some parts, and engines of \$6.0 billion. Quota levels will grow 15 percent annually until eliminated. Within four years of its accession to the WTO, China will eliminate its tendering requirements for non-government purchases of engines. China will not apply or enforce export performance or local content requirements as a condition for importation or investment approval. China has agreed to apply tariffs uniformly and all taxes equally to domestic and foreign engine businesses. This will alleviate the uncertainty associated with China's inconsistent application, refund, and waivers of its 17 percent value added tax.

Motor Vehicles and Special Purpose Vehicles

China's current tariffs on passenger motor vehicles range from 80 percent to 100 percent. China will reduce these tariffs to 25 percent by July 1, 2006. China will reduce its tariffs on special purpose

Chemical Products Are Indiana's Largest Export to China

Indiana's merchandise exports to China totaled \$90.4 million in 1998

Source: U.S. Department of Commerce, Exporter Location Series

vehicles to an average of 12.4 percent from the current average of 17.4 percent. Reductions will begin upon accession and will be fully implemented by January 1, 2004. Quotas and licenses on motor vehicles and special purpose vehicles will be phased out by 2005 with an initial quota level of \$6.0 billion, which exceeds the actual level of trade prior to implementation of the 1994 Auto Industrial Policy. Quota levels will grow 15 percent annually until eliminated. Most quotas on special purpose vehicles will be eliminated by 2002. Currently, only certain Chinese banks are authorized to conduct auto financing and only for certain vehicle models. Upon accession, non-bank financial institutions will be permitted to provide motor vehicle financing without any market access or national treatment limitations. Trading and distribution rights for motor vehicles and special purpose vehicles will be phased in over three years. China will permit foreign enterprises to provide related distribution services such as repair and maintenance services over a three-year phase-in period for almost all products, including motor vehicles and special purpose vehicles. China has agreed to eliminate local content requirements immediately after it accedes to the WTO and not to enforce provisions in existing contracts that impose this requirement. No longer will China require foreign companies to use China as an export platform to send products to the United States.

Construction Equipment

China will reduce average tariffs on construction equipment by more than half to an average rate of 6.3 percent by January 1, 2004. Within four years of its accession to the WTO, China will eliminate its tendering requirements for non-government purchases of construction equipment. Trading and distribution rights for construction equipment will be phased in over a three year period. China will not apply or enforce export performance or local content requirements as a condition for importation or investment approval. China has agreed to apply tariffs uniformly and all taxes equally to domestic and foreign construc-

tion equipment businesses. This will alleviate the uncertainty associated with China's inconsistent application, refund, and waivers of its 17 percent value added tax.

Insurance Services

China will reduce geographic restrictions and quantitative limits for insurance companies and expand the scope of business activities permitted for foreign insurers. China agreed to award licenses solely on the basis of prudential criteria. China has also agreed to grandfather the existing level of market access already in effect at the time of China's accession for U.S. companies currently operating in China.

Trade Stories

Brulin and Company, Inc. (Indianapolis) manufactures environment-friendly industrial detergents to clean and degrease metals. International sales are relatively new to Brulin, but the company has been exporting to a few distributors in China for the last three years. The company sold approximately \$10,000 worth of chemicals to China in 1999.

Maxon Corporation (Muncie) specializes in the engineering, designing, and manufacturing of industrial heating equipment. Maxon's products are used in baking processes, and the company also sells replacement parts for furnace maintenance. Maxon has been selling to five distributors in China for the last year and a half and sees a potential for its company to expand in China by selling oxygen-burning furnaces to glass makers. Tariffs reduced to an average of 8.3 percent and a more transparent import regime resulting from China's WTO membership should help Maxon sell more to China.

A/Z-Tech, Inc. (Fort Wayne) designs and produces test equipment used in the production of magnet wire,
(*Trade Stories continued on page 8*)

ROLE OF SMEs IN EXPORTS TO CHINA

Small and medium-sized enterprises (SMEs) are responsible for a growing share of U.S. exports to China.

- In 1997, SMEs generated 35 percent—more than one-third—of all U.S. merchandise exports to China. This figure is up significantly from a 28 percent share in 1992.
- The 35 percent SME share of the China market in 1997 was higher than the SME share of overall U.S. merchandise exports (31 percent) in that year.
- More than 60 percent of all firms exporting from Indiana to China in 1997 were small or medium-sized enterprises (fewer than 500 employees).

Small & Medium-Sized Companies Account for 62 Percent Of All Firms Exporting From Indiana to China

156 companies exported merchandise from Indiana to China in 1997

Definitions: small = fewer than 100 employees; medium = 100–499 employees; large = 500 or more employees. Source: 1997 Exporter Data Base, U.S. Department of Commerce.

Overview of China WTO Accession Benefits to the United States

The Agreement is a one-way deal that will open China's now largely closed market to U.S. exports. By enacting Permanent Normal Trade Relations (PNTR), the United States is merely maintaining the market access policies it already applies to China. If Congress enacts PNTR, the agreement is expected to provide a substantial boost for U.S. exports. If Congress fails to pass PNTR, American companies, workers and farmers will be denied the great bulk of benefits of the agreement the United States already negotiated—including broad new market access for critical services such as telecommunications and distribution, strong import protections, and the right to enforce China's commitments through WTO dispute settlement. Failure to enact PNTR means fewer U.S. exports to China. U.S. competitors in Europe, Asia and elsewhere will gain market share at the expense of U.S. exporters as these countries will enjoy the full benefits of China's market opening WTO commitments.

Deep cuts for tariffs in manufactured products sectors¹ affecting most U.S. exports—averaging an across-the-board 60 percent cut in tariffs for industrial products. Important gains include a 62.5 percent cut in tariffs for pulp, paper and printed material and elimination of tariffs for information technology products including electronics, telecommunications equipment, and computer equipment.

Tariff bindings for every sector. U.S. industries gain greater certainty of access with China's commitment not to raise tariffs on any products above the negotiated ceiling (bound) rates.

Huge reduction in paperwork costs—a boon to smaller exporters. Simplification, harmonization of customs procedures and licensing will slash costs of processing export orders.

Elimination of quotas and non-automatic licenses for all manufactured products by year 2005. Only a handful of quotas will remain after year 2003. While quotas are being phased out, the quota level will be higher than our current export levels and will increase by 15 percent each year until the quota is eliminated.

By joining the WTO, China is committing to establish a tariff-only import regime for **agricultural products**; all non-tariff barriers will be eliminated. Any other measure, such as inspection, testing, and domestic taxes, must be applied in a manner that is consistent with WTO rules requiring a transparent and nondiscriminatory system. All health-related restrictions must be based on sound science.

China also committed to implementing **agriculture tariff-rate quotas (TRQs)** on economic rather than political criteria. These commitments are designed to ensure a transparent and consistent system for allocating shares of the TRQ to end users and provisions to

ensure that quota-holders are not impeded in utilizing their allocations.

China has committed not to use **export subsidies** for agricultural products when it joins the WTO. This commitment is particularly useful for China's potential exports of corn, rice, and cotton, which in the past have displaced U.S. product from third-country markets.

Bilaterally, China agreed to the terms for removal of scientifically unjustified restrictions on importation of U.S. **wheat and other grains, citrus and meat.**

Foreign exchange balancing requirements—which link a company's level of imports to its level of exports—will be eliminated upon accession. This allows U.S. companies to make market-driven decisions about what to import and export instead of decisions driven by the Chinese government.

Local currency banking will be allowed starting with foreign clients upon accession, followed by Chinese enterprises two years after accession and Chinese individuals five years after accession. Foreign currency business will be allowed without geographic restrictions upon accession. China currently limits foreign banks to foreign currency business in selected cities.

Foreign securities firms may currently only trade in a limited number of stocks designated for foreign investors and then only via shared commissions. Upon accession, China will allow foreign firms to trade these shares with no Chinese intermediary. By three years after accession, foreign entities may establish securities joint ventures (JVs) with a minority equity share for foreign investors to underwrite all shares and corporate and government debt, and trade all these securities except those equity shares restricted to Chinese investors. Also upon accession, foreign entities may establish minority JVs to manage assets of all sorts.

Insurance licenses will be granted on a prudential basis, without numerical restrictions or discretionary economic needs tests. China currently only allows selected foreign companies (including four U.S. companies) to operate in China on a limited basis in only two cities.

Majority equity share for foreign non-life insurance entities will be permitted upon China's accession. Wholly owned subsidiaries will be allowed two years after accession. Life insurance joint ventures will be permitted at 50 percent equity share upon accession.

Easier access to and more control of distribution systems in China allowing U.S. companies to operate commission agents' services, franchising services, wholesaling, retailing and direct sales of their own products in three years post accession for almost all products.

Foreign companies will also be permitted greater control and access to other services related to distribution, including maintenance and repair, rental and leasing, advertising, technical testing and freight inspection, packaging, courier, storage and warehousing, and freight forwarding agency services.

The right to trade (import and export) will be permitted for almost all products within three years of accession. Currently, the right to trade is strictly limited; only companies that receive specific authorization or who import goods to be used in production have such rights.

Telecommunications services are currently not permitted to be supplied by foreigners in China. However, with its accession, China has agreed to allow foreign participation for both value-added and basic services. China has also agreed to undertake all the obligations contained in the WTO Reference Paper on pro-competitive regulatory principles. Telecom services which foreigners can supply under the Agreement include e-mail, voice mail, online information and database retrieval, facsimile, paging, cellular, and internet services via any technology including satellites.

Professional service providers will now be permitted to operate in China and receive national treatment for accounting, auditing, bookkeeping, management consulting, legal, tax consulting, architectural, engineering, and computer services.

The elimination of local content requirements will result in better access for U.S. exports and eliminate unfair incentives or requirements to use domestic goods.

U.S. exports and investments will be free from government-imposed conditions such as technology transfer, research and development in China, and offsets. Upon China's accession, such conditions may only be negotiated between the parties to a contract and not imposed or enforced by the government.

U.S. companies can sell their products in China and not be forced to export a certain percentage back to the United States or elsewhere. This eliminates the non-market incentive to use China as an export platform.

State-owned and state-invested enterprises will be required to buy and sell based on commercial considerations, making the purchase process more market-driven and transparent for U.S. companies and will provide new sales opportunities to U.S. firms.

China has agreed to establish **judicial review** procedures for the prompt review of all administrative actions relating to the implementation of laws, regulations, judicial decisions and administrative rulings related to its WTO obligations. The tribunals will be independent of the agencies entrusted with administrative enforcement.

Greatly improved enforcement of China's commitments through the WTO dispute settlement process. The United States will now have allies in other WTO members to address violations of international trade norms.

Current U.S. practice of using a special, non-market economy methodology when calculating dumping margins in **antidumping investigations** involving imports from China will remain in effect for 15 years. Chinese industries will continue to have the burden of proving to the U.S. government that market economy conditions prevail in their industry to avoid application of this methodology.

China will apply its trade-related laws **uniformly** throughout all of China including land and seaports.

China will be required to apply equally the value-added tax (currently at 17 percent for most products) to domestic goods as well as imports under the WTO **national treatment** provisions.

The United States will have access to a **product-specific safeguard mechanism** for 12 years which will allow the U.S. to address more easily any rapidly increasing Chinese imports in a targeted fashion in cases of actual or threatened market disruption to a U.S. industry.

China has agreed to incorporate into the WTO a **textile-specific safeguard** drawn from the U.S.-China Bilateral Textile Agreement.

¹For more information on tariff reductions, see tariff summary table.

ADDITIONAL INFORMATION AND ASSISTANCE

The reports for each of the 50 states are available at www.chinapntr.gov, as well as supplemental information on the benefits of China's membership in the World Trade Organization for U.S. industry and agriculture. Additional information on agricultural products is available from www.fas.usda.gov and speeches and testimony are provided on www.ustr.gov.

For counseling and assistance regarding exporting to China, call the Trade Information Center at 1-800-USA TRAD(E) or the Agriculture FAS Trade Assistance Office at 202-720-7420.

To discuss problems you are experiencing in exporting to China or a Chinese trade barrier you are encountering that is limiting your ability to export, please contact the Commerce Department's Trade Compliance Center. The fastest means to contact the Trade Compliance Center is the internet at <http://www.mac.doc.gov/tcc>. It can be reached also via e-mail (tcc@ita.doc.gov), fax (202-482-6097), or phone (202-482-1191).

¹Average 1997–98 applied duties for each product category. Reductions will be made from the 1997–98 base rate for each tariff line. Most cuts will be made in equal annual increments.

²Average end rate for each product category which will be attained once China phases in all duty reductions agreed bilaterally with the United States. All reductions will be completed by January 1, 2008, with 70 percent of all reductions on industrial goods achieved by 2003 and 98 percent of all industrial duty reductions by 2005. China's agreements with other countries may result in lower rates and shorter staging.

³Includes heaters, ventilators, air conditioners, washers, refrigerators, centrifuges/dryers.

⁴WTO Information Technology Agreement (ITA), implemented in July 1997.

³Import data from China Customs Administration, on a calendar year basis.

⁴TRQ quantity and private share will be phased in by 2005. On January 1, 2006, China will eliminate the TRQ and state trading for soybean oil, with nothing but a 9 percent duty remaining.

(Trade Stories continued from page 3)

which has applications in motors, transformers, automobiles, televisions, and kitchen appliances. The company has had considerable exports to China over the past 10 years. However, A/Z-Tech has also experienced difficulties with customs procedures, including one instance in which Chinese inspectors failed to properly reseal instruments that were thereby ruined. Richard Duke, company president and a member of the Indiana District Export Council, would welcome permanent normal trade relations with China, and he hopes his company will be able to benefit from the lower tariffs on machine exports to China and from China's improved customs procedures which will conform to international practices.

The David R. Webb Company, Inc. (Edinburgh) has been a hardwood veneer manufacturer in central Indiana since 1894. The company's annual sales amount to \$63 million dollars, half of which is derived from exports to Europe, Asia, Africa, Australia, and the Americas. Webb employs more than 400 people and is the largest employer of this small town. Recognizing China's enormous need for imported hardwood products, Webb has been actively trying to penetrate the Chinese market for the past fifteen years. As a result of its efforts, the company now exports approximately \$3 million worth of products to China each year. There is currently an 18 percent tariff on the products Webb exports to China, which is a significant barrier to increasing exports. Under the WTO agreement, China will commit to a reduction of tariffs on hardwood veneer products to 3 percent by 2002.
